

Rios Fernandez

I want to start off by saying that AI Data Centers are widely opposed by democrats, republicans, and independents. Project Jupiter failed to submit reports about jobs, missing two deadlines. The emissions that will be emitted from the center go against the environmental path NM is headed in. We need to conserve our water and this development will waste the little water we need to conserve. Yucca Growth Infrastructure LLC is lying through a disinformation campaign to residents how this will "bring water and jobs" to our state. There are multiple independent and renown journalists visiting towns with AI data centers. It's been found in these places that pre- and post-data center the color of the water changes, it brings no major influx jobs or economic benefits, and causes major greenhouse gas emissions, increased heat, major noise pollution, and significant loss of water. New Mexicans by and large know the truth. We know the truth that Yucca Growth Infrastructure and Project Jupiter's disinformation campaign with paid canvassers and paid partnerships with social media influencers is nefarious and not good for the environment or residents of the community. With such mass public opposition all they can do is lie and hope that deception wins. As a 16th generation New Mexican and lifelong resident I strongly opposed this AI data center project. We don't want a diluted version of the project. We don't want the project at all.
