If projects like this keep happening, we're not going to have essential supplies that every living thing on Earth needs to survive. AI centers already use up so much water as it is, and if we keep going in this direction we won't be able to live longer than maybe a decade or 2 past the point we're at now. AI is so damaging to not only the environment, but the psychological effects it has on the people that use it are so dangerous and has already contributed to the literacy crisis. AI psychosis is already becoming an extremely prevalent and dangerous thing. We weren't dependent on AI not even 5 years ago, why do we suddenly need humongous AI centers? It does nothing but make humans more ignorant and blatantly stupid, use all of our clean drinking water, and if this happens it will boost climate change SIGNIFICANTLY. The heat right now is already practically unlivable, with a noticable heat stroke increase in particularly the elderly. Everyone is complaining about how hot it is but no one wants to do anything about it when scientists have been warning us about it since I was a child. I freshly turned 18 a few months ago, and I already worry for my future. I worry if me and my partner will be able to have the life we desperately want to have, and at this rate, we simply won't. This is a huge problem and something needs to be done about it or everything will eventually end up extinct from the severe climate change of these projects that will do nothing for us in the long run but make humans dumber, use up all of our water, and increase climate change dramatically.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
