

Susan Lewis

DO NOT allow this permit to be approved. AI Data Centers extremely affect the water. AI Data Centers would require about 504 GALLONS OF WATER ANNUALLY - that's about 1.4 MILLION GALLONS OF WATER A DAY! Where do you think you're going to get water from in NM - a state that is experiencing a DROUGHT! Have some decency and make a conscious choice. The proposed Jupiter Project will cause extreme harm to the people who live in the area by affecting their drinking water and the water they use to grow food, as well as bathe and prepare meals and for their showers & baths. DO NOT APPROVE THIS PERMIT!
