

Joshua Crepeau

I strongly oppose the construction of Data Centers on New Mexico land. Our limited resources are already being stretched thin and now corporations want to make it significantly worse. It doesn't matter what kind of technology is used to power or cool data centers, it all adds pollutants to our environment and takes resources away from the citizens. Please do not allow this construction to move forward and put even greater strain on our state.

I personally believe the air quality permit should be denied. Thank you.
