

Mirinisa Stewart-Tengco

I fully oppose this initiative. A data center is wholly unnecessary to our community and poses a threat to our water, air, land, and values. In no universe does New Mexico need a data center to thrive—we already have plenty of jobs and infrastructure that aren't purely extractive and that don't serve solely to enrich outsiders while depleting our already-scarce water and other natural resources. Yucca OUT of New Mexico, and no data centers in our state!
