

Shelby Wiseman

I vehemently detest project Jupiter. This company and others like it have been widely known to lie, cheat and steal their way into building their data centers. This project in no way would benefit any New Mexican. We are constantly already in a water crisis. I worry what my nieces and nephews might be left with in 50 years long after project Jupiter has squeezed everything they can from us. These jobs are temporary and will not push NM forward, once the building is gone what jobs remain? These facilities are well known to be LOUD 24/7 disrupting people and wildlife alike. They are also known to NOT be capable of a "closed loop system" and they will bleed us dry. There are many states that are suing based on that alone. Please think about the long run. Our state is beautiful but also struggling and does not deserve to be used and thrown away for our resources. We are better than this gimmick.
