

Annaliesa Jimenez

I am a resident of this earth. PROJECT JUPITER will put out more carbon dioxide into our atmosphere, an atmosphere which is already exposed to carbon dioxide levels causing climate change, ocean acidification, and general pollution. PROJECT JUPITER will unsustainably cool and power their data center with water; water which communities and our planet requires. The community where this project would be built around should have the ability to review and comment on the air quality permit, as it affects them directly. Money and production is important in our world, but not everything. What is the importance of AI or money if there is no livable world to use it in? Be better. Don't ruin this world further.
