Dear NMED Staff,

I choose to remain anonymous, but I write this because I am concerned for the safety of our world, and of the people. I strongly advise for the New Mexico Environment Department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI Microgrid in Doña Ana County. Climate Change has been changing at a drastic rate ever since humans have grown more and more reliant on machinery. Global warming has been harming our world for over a century, and the use of AI has sped up the process. With this powerplant, millions more tons of greenhouse gases will be released each year, doing nothing but adding more harm. This pollution is no small amount, and it will completely wipe out all of New Mexico's climate progress. Additionally, the project site will be built near school's, where children learn. As people, it is our duty to protect educational sites and systems so everyone can get their schooling. While the toxic pollutants are now under "acceptable" level, fuel cell generates hazardous waste. Bloom Energy also has a history of illegally dumping hazardous waste. Fuel cell technology is also not certain, as it has not yet been used at this register. If NMED does not reject the permit, I ask the department to please hold a bilingual hybrid public hearing near the Santa Teresa community, so that residents can learn about the risks associated with fuel cell technology.

Sincerely, Anonymous
