

Kiana morris

Dear NMED staff I am kiana and I am writing this because I am concerned about the risks and problems that project Jupiter poses to the community. I am submitting this to urge the New Mexico environmental department to reject Yucca Growth Infrastructure, LLC's air permit application for the YGI micro grid in Dona Ana county. There is numerous concerns with project Jupiter including but not limited to; the release of 10 tons of greenhouse gases that will be released this is super bad for climate change and completely sets us back with what we have done for climate change in the past few years. The planet is already starting to see some of the effects that climate change brings and, this will only make things worse. Another major problem is the usage of water that towns, family's, and the wildlife all need to survive. Nobody owns the water and it is not up to one person what gets done with the water that all living organisms on the planet must utilize to survive. We cannot live without water but we can live without Ai data centers. Unfortunately water is not the only valued recourse getting tampered with. The oxygen that we breath to live is getting more and more polluted and the data centers only speed up that process. This planet does not need us to survive, we need it. Family's who's homes are in mile radius from these data centers report constant loud noise and headaches from these centers. Approving this permit would be government-sponsored environmental racism. If this permit is not denied a public hearing should be held in Santa Teresa, in both English and Spanish with the option for people to virtually join. Thank you for your time sincerely kiana morris.
