I don't even live in the USA and I know that this isn't right. The amount of energy and water this project will consume is massive and we don't even need more data centers that will ruin this planet we live on. I'm from Europe and the climate jump from last year to this year is so insane our electricity keeps blacking out. Not to mention how many people ended up in hospital and how many even died of the insane storm that this heat will bring. The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste. It's so sad to see that people are willing to ruin our planet for profit and nothing more. I'm tired of Americans proving that us (people who live in Europe) are smarter about this.. And so I ask you, stop this. Stop this before the global warming is irreversible. Once this planet is ruined, there is no second planet. No second chance to make this right because this is our chance there's not even 3 years until we can't do anything. The earth can be a nice place if we let it. So let it. Stop ruining the nature for money, because in the end the stuff if you can no longer gain stuff from the nature, such as air and food, you'll realize that money is useless. And I pray to God you all realize this sooner than later. The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably. Listen to your people and not only them. Listen to all of us, Americans, Asians, Europeans.. Everyone. We do not need more AI data centers.
