

Keeandre Charles

I heavily urge against the construction of this data center not only do they have a proven affect on the health of communities due to things like water shortages, noise pollution and the loss of public land, they in addition do not provide a level of value at all comparable to the natural landscapes belonging to these communities. Ai data centers continue to serve only as a way for corporations to extract the life out of people and land and to allow this to New Mexico again as a state with much history of that already would just be cruel. I strongly urge the council to hold a hybrid informational session to explain the harms and dangers of a data center in their communities testing an unknown power source
