I respectfully oppose the proposed Project Jupiter data center. While I understand the potential economic benefits, I'm concerned about its long-term impacts on our community as a whole, not just the people living nearby. Large data centers can require significant amounts of electricity and water, increase traffic during construction, strain local infrastructure, and affect the environment and quality of life for residents across the area. I encourage decision-makers to carefully evaluate the environmental impacts, infrastructure demands, and broader effects on the community before approving this project. Any development should prioritize transparency, sustainability, and the well-being of everyone who may be affected.
