The development of AI Data Centers in the US right now is highly unethical considering the environmental struggles we are already dealing with, especially New Mexico desert where the allocation of our water is already a huge issue, using our local water supply even on the "closed loop" advertised will more than likely negatively affect our community after seeing what has happened in other towns with data centers installed. The development of these centers is not productive or efficient for New Mexico communities and forces our ecosystems to sustain a mega corporations AI developments that already are being used in questionable ways for security and wars.
