

Michael Argueta

The environmental department is supposed to be working to protect our land and our locals who inhabit that land. Data centers like Project Jupiter do nothing but harm the beautiful land of New Mexico that we are supposed to protect and cherish. The Rio Grande, especially in the parts that run through New Mexico, does not have the water to sustain a Data center and also sustain the life that needs it. New Mexico does not need another project that puts money in the pockets of billionaires instead of our hard-working citizens. This project will do nothing but harm the land and people of Doña Ana County. AI data centers consumed 264 BILLION gallons of water in 2025, and according to a study by Alex de Vries-Gao, AI data centers release around as much CO2 per year as the entirety of New York City. AI facilities often hide some of these, as the metrics they report do not include indirect water consumption, however indirect water consumption also affects the environment and people in the area. Even if data centers didn't use that much water, they still pollute almost all clean drinking water in the area, causing citizens to not have clean drinking water—something that should be a basic human right. Adding a data center is not protecting the land or our people, no matter how many jobs it creates, it will harm more people in the long run. There is a long history of projects like this in New Mexico in poor and native american communities, making land almost uninhabitable for them. As someone who loves New Mexico, is passionate about the environment, and is going to college to hopefully study freshwater ecology in places like the Rio Grande, I urge you to not let this happen. This place means the world to me, and an AI data center would destroy everything I love about it here. Please protect our towns, our state, our people, and our environment from their demise.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste.

If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.

Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution.
