

Zoey Tafoya

As a lifelong New Mexican I strongly oppose Project Jupiter and any future data centers that may try to be built/operated in New Mexico. Our air, water, and land are all so precious and must be protected. Data centers and AI are a direct threat to the planet/environment (as well as the human spirit) and must not be allowed to pollute our beautiful state. Given that Project Jupiter would not have any direct benefit for the people of NM and in fact would only serve to drain and pollute our resources, I think it should be struck down. We only get one planet and our resources are finite.
