

Kelly Johnson

I believe it is a horrible idea to build a data center, especially near a river and active community. Long term exposure to the loud buzzing from data centers will lead to people losing their hearing, along with the air quality being ruined by HAPs. The Rio Grande will also dry up even worse than it has before, considering how much water AI data centers need to cool down. I've seen many people from the nearby community expressing how badly they are against building anything related to AI. It would be disrespectful to ignore the people who live there. Please do not go through with Project Jupiter. It will be horrifying for the climate and people's health.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
