

# Jacob Chirin

I am opposed to Project Jupiter.

This seems like yet another case of a large corporation strong-arming a small municipality into an offer too good to be true.

First, on water: The closed loop system is only mostly closed, and while it does use non-potable, industrial water, that's still water. As I'm writing this the Rio Grande has run dry (Again) and by the forecasts we're in for one of the hottest summers on record. (Again)

Second, on power: The fuel cell setup tying in to the local grid is a nice idea, but you know what's nicer? Solar and/or Wind. New Mexico has some of the best places on the planet for it, with vast deaths of sparsely populated land
