I don't live in New Mexico, but I still want you to deny Yucca Growth Infrastructure's air quality permit because it will affect the communities there and the planet as a whole. AI data centers are known to use large quantities of fresh water to cool the servers down, and large amounts of energy to keep the servers running. This, of course, comes with risks we already know, such as droughts and power outages in nearby communities. The data center will also release around 10 million tonnes of carbon dioxide annually, which is equivalent to the carbon emissions of countries such as Cameroon, Mozambique or Tajikistan, which will impact our planet negatively. Please, don't build that data center.
