

Nikka Angela Ruado

AI is NOT our future and we do not need necessary AI data centers. We are losing the ART OF HUMANITY once you develop that industrial infrastructure. Please consider what we can make use of that money for MEANINGFUL investments rather than this monstrosity just IMAGINE how much we can feed to the poor, finance to those who are suffering, advance the economy and especially to save wildlife, to grow plants in a way that is a form of agriculture or just to enhance our climate, OUR Earth. AI is controlling our lives, applications of Artificial Intelligence (AI apps) is ENOUGH. I, as a junior high school student DO NOT approve of this atrocious project that will CONTINUOUSLY drain and create an impactful change in our PLANET. View the project as harmless, but AI uses CLEAN water, imagine just how many people lack this controversial resource. I speak up for what I think is right, and this project must stop. Hear the voices of the people, before constructing anything selfish that involves the sake of lives for every living organisms. This project, is destroying homes to those animals who live for survival.
