I lived and always lived in the northern part of our state it's beautiful and I have yet to visit our southern area of this beautiful state, but project jupiter will take those chances away from those who are like me and those are visitors to come and see the beauty in the nature of our home not to mention the deserts that hold parts of time from the past. I remember time as a kid my school would do history lessons on how the southern part of our home state had so much areas that held on to the past keeping it as a reminder that we are a dust in the timeline on this planet but we are rapidly changing for the worst and this new "project jupiter" will contribute to this horrible rapid process of ruining our home, the only one home we ever got, earth it's wonderful and amazing that we are able to live on it and we should be keeping beautiful as long as we are on it during our time. Put a stop to this new project it brings nothing to the state or its people no one is benefiting from it except those who place it, which are people who are not even home to this state, we barely have anything to give to ourselves, what does this give us except take resources that are already limited. Stop project jupiter.
