

NA NA

This project cannot, in good faith, be approved until all energy is created by renewable energy with no carbon or no2 emissions. A project that will create more carbon emissions than ABQ and LC combined is shameful and should not be considered. Its impact is severe, and creating heat domes in our local communities and contributing more broadly to climate change is irresponsible. These companies have more than enough money and means to create completely sustainable grids. Bloom Energy can use Green Hydrogen tech, not this "Blue" hydrogen tech which is not remotely sustainable. This application, as is, is wildly harmful to our communities and it is your duty and responsibility to ask more of these companies, should they want approval to build and conduct business in our state and communities.
