

Isaac Franklin

You are actively destroying the world, that's not an attention grabbing opener, it's the open truth. Data centers poke more holes through our ozone layers than Count Vlad the Impaler poked holes through peasants. Please, please, swallow your greed and stop creating this black hole of resources. This data center will make the air quality plummet, it will unleash a low buzzing tone into the earth as if Mother Nature were constantly screaming mechanical tones from the damage this data center causes. This data center, due to its placement in lower income more red lined areas, is an active assault on the poor and exploited. It is an act of environmental racism classism, the construction of it, and the associated plummeting of most real estate prices in the area will leave families stuck within its area, within its droning sounds and constant draining of the local water supply. Please, please do not make this data center. It has not even been planned properly, there should have been an additional 60 days to review.
