We do not need or want data centers! The Rio Grande is running low. People need water more than they need the convenience of AI. People need uncontaminated air to breathe! Sure, initially, there will be jobs, but what job is worth destroying our children's futures? We don't want to live in the convenience of now, we want to ensure a brighter future for our children. What happens when water runs out and the air is polluted. People with the ability to, will move. What happens when everything is up and running and AI can now take over your job? More people will move. Then what happens to those who don't have the means to move? Our beautiful state will suffer. The initial gain is not worth what will come. Our economy will be destroyed and people will die. Our environment will suffer. Ecological systems destroyed. AI, unregulated, is destroying our future. It is making us dumb and lazy. We are losing creativity and motivation. If AI takes over, our future and our children's future is a wasteland. We don't want Project Jupiter!
