

Nicholas West

I'm a resident of Albuquerque New Mexico and I STRONGLY OPPOSE any data centers here in New Mexico.

Data centers have zero rights to be in an area that already struggles with water management given we live in a desert. Not only that, but it is a well know FACT that a data center drives up energy costs for the ENTIRE state. This isn't hyperbole, it's been proven over and over again with every data center that they don't pay their fair share. Given the already high energy costs in the state, a data center will only drive prices higher making the affordability crisis worse in our state.

As a highly educated adult who's studied data centers for well over 2 years, I can say for certain that this project will not provide our state with ANY benefits whatsoever. Because of this fact, I will reiterate what I said in my introduction. I STRONGLY OPPOSE ANY DATA CENTERS BEING BUILD IN THE STATE OF NEW MEXICO!
