

Jade Luster

For starters, there is no safe way to build the data center. No matter the technology. The risks and concerns are still in effect. I want to make it absolutely clear, again, no matter the technological changes the data center has no right to be in an area with an already poor air quality. Most concerning points are water pollution effecting the world more than already. Not to mention the thousands of animals homes destroyed in order to make this possible. Please take into account all the people screaming that this data center is not a good idea and deny the permit. Secondly, it's important that everyone has a chance to speak their mind on the dangers and effects of this data center/permit. Lastly, it's important if the permit is accepted or denied a hearing should be held in both English and Spanish to make sure all citizens have the opportunity to fully understand what till be happening in their community.
