

Marian Grace Janaban

I have seen the effects with ai data centers even in it's small scale and this shall destroy all of us. Data centers have been the cause of countless displacements, pollution to the environment, and rapid effects in wildlife animals being harmed in the process. This is unethical and should be further studied rather than be built in this current time and pace. Please reconsider and think of the people. New Mexico has their own rights to protect their own environment and they also have the very right to review and comment on the situation. With the past history of Bloom this needs to be denied air quality permits because of the history of illegal dumping of hazardous waste. If the permit continues to be given there should be a public hearing for the people of Santa Teresa. It's the best interest to always ask the people who live there. -Marian
