

Olivia Rowe

This data center will be EXTREMELY harmful to the environment surrounding it because this plant will release toxic chemical pollutants and 10 MILLION TONS of carbon dioxide into our air. In fact there are schools just miles away, and the children that attend could potentially be harmed. Our world is facing a global warming crisis and this data center would just worsen it. There's no reason to take away the already scarce water supply to towns surrounding for an unnecessary, expensive, and pollutive building. I believe the public should be given an additional 60 days to review this permit and share their opinions. I personally also believe that the permit should be DENIED because Bloom Energy has a past of illegally dumping hazardous waste. If this permit is somehow NOT DENIED then a public hearing must be held in Santa Teresa in English AND Spanish with the option to attend virtually. If this permit is granted then it is a form of government sponsored environmental-racism because residents of Dona Aña are already unfairly impacted by environmental pollution. I sincerely hope you take the time to think this over and consider the major impacts that project Jupiter will have, not only on the surrounding environment, but also the entire world.
