the last thing we need is another data center, the world is already falling apart with things such as nestle, ai, and large companies who dump trash in the oceans and pollute the earth. Humans do not crave the smell of smoke or the muck in their water, we all deep down crave the experience of the earth, of the trees, of the water and the air. this data center is doing nothing but hurting everyone else all around the world. if this data center does happen to be made, it will be an extremely devastating rise of temperature, unclean air, and unclean water. since we apparently dont have enough of all of those three things. your phone, chatgpt, and your social media is not more important than the trees, the animals, the water, and most importantly, everyones lives. including yours. this data center is completely unnecessary and is just another way for the government to pursue their plan of making all of us weaker.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
