

Kylie Scott

Project Jupiter is ABSOLUTELY disgusting and needs to be stopped this data center is going to ruin what clean air and water we have left their is SO much evidence of how AI and data centers ruin the environment and earth on top of what has already been affecting the environment for thousands of years us humans are reaching if not already to the point of no return and this is just adding to it. We have lasted THOUSANDS of years without ai and now theirs a sudden change and big push for it witch is NOT needed at all we do NOT need ai especially since theirs little gain from it and MAJOR negatives. Also given the facts of: The history of hazardous waste dump done by bloom in the past (witch in my opinion is grounds for closure and legal action against bloom) and secondly the fact that the Doña Ana county has NOT reported federally approved air quality in years meaning that their is already HEAVY pollution in Doña Ana. This ai data center will cause more and more pollution in Doña Ana county and the surrounding areas witch will also affect the citizens already living there and already affected by air pollution witch you have done NOTHING affective to stop. This decision to put a ai data center has already been projected to release 10 million tons of carbon emissions ANNUALLY and use up what's left of the rio grande river. This decision should be up to the people who will be paying for this ai data center with their safety, health, air, water, and their lives. They have already opposed against this idea but you guys don't care what they want you care about the next paycheck witch is NOT what ur job was invented to care about. This is absolute bull shit and a stupid thing to try and support when thousands of not millions will be negatively affected by this.
