

Gabriela Ramírez

I don't support this datacenter, at all, in what world would it ever be okay to build a data center that consumes more water than a whole country? This is just trying to speed all the process of killing the planet and dooming us all, AI is the utter death of all creativity, intelligence and critical thinking; we didn't need it to exist before, and we don't need it now, so stop dooming what little future we have left! The greed that these billionares techbros hold upon this sinking ship they call AI disgusts me.
