We do not need this Ai center as a citizen living near the area, it is proven data centers put out a frequency high enough to cause miscarriages in animals, so what does that mean for us humans?

We are all begging you to not go through with this, the amount of toxins and wasted water on top of this will be detrimental to our health and survival. We lived better lived before ai was a popularized thing, let's go back to that. Please seriously consider everyone's concerns and do not do this.
