

Lucinda Marker

I strongly urge that a significant pause be put in place concerning Project Jupiter. I have never, in 34 years as a New Mexican resident, experienced a drier, warmer winter, spring and summer than I have during this 2025-2026 period. I am deeply concerned.

New Mexico is experiencing a record snow drought, collecting just 6 percent of our median snowpack. This is a direct result of our present climate crisis and this project's water use would waste more of this resource.

We owe it to our state, to future generations to be judicious in our decisions.
