I firmly believe project Jupiter would be a detriment to Albuquerque, and new mexico as a whole. both in the destruction of natural land, in the pollution it would cause, and to new mexicos stance as a democratic state. We pride ourselves on natural beauty and the protection of our public lands, as somewhere where the world is a little more untouched and beautiful. In a world that so often seeks to destroy nature or treat it carelessly the precious nature of our state becomes only more relavent. The pollution alone, that is clearly evident in similar projects should be enough to say no to project Jupiter. New Mexico has a hard enough time sourcing water without added contamination. New Mexico is also proud to have clean air, that people travel to experience, it would be disgraceful to jeopardize that for something that would not benefit the people of new mexico The air quality permit application should be denied given Bloom Energy's history of illegal dumping hazardous waste. If the permit is not denied, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually. Approving this permit would be government-sponsored environmental racism as residents of Doña Ana County are already disproportionately impacted by environmental pollution.
