

Hannah LaFleur

I am a resident of Cypress, Texas and I am asking that you deny Yucca Growth Infrastructure's air quality permit. Project Jupiter is entirely unnecessary and unwanted. It will pump 10 million tons of carbon dioxide into the atmosphere. How can that be considered clean? Bloom is known to be careless with toxic waste, so what about their history gives anyone the impression they are to be trusted with this? What use will we have for AI when we are starving because we don't have enough water to feed the food? Not to mention the environmental impact it will have on the environment and the welfare of the people in those communities. How does that enable them to lead a better life? We have not needed AI to come this far, we don't need it now. I ask that you use all that money and infrastructure to create something that actually helps PEOPLE live better lives. Not corporations trying to move down their bottom line by firing all their workers because "AI does it just fine." AI is meaningless against all we stand to lose from its existence.
