A.I. data centers have very evidently, in the past, been harmful to the areas they are located in. With such conditions of disturbances to civilians and wildlife, residences having their bills go up due to the use of resources by these centers, and the fact that there are many people who now have a lack of sufficient resources required to live due to these data centers in their area, it is very clear that these constructions bring nothing but more difficulty to those around it. Our world is not for some scummy big corporation to destroy for their profits. In fact, there is a rather small majority of the world, excluding those who propose these data centers, who actually believe the construction of such things will benefit us.

"The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually."
