

Rachelle Serna

Project Jupiter is not what's best for the community. I've talked to people where they're building AI data centers. They told me that they hate them there for many reasons such as traffic, noise, and the cost of living. Cost of living prices are already high enough everywhere as is, but they stated renting a home was currently at \$4,000 or more in their city due to the AI data center which most people can't afford. They didn't even mention the environmental problems with them but water scarcity is a huge concern in our area. If we have extra water to spare at all it should be going to the farmers that struggle with the little water given from their water rights they pay for every year regardless of how much they're allowed to use. It's awful that community input wasn't taken before our political leaders gave Project Jupiter the go ahead. Anyone in a position of power that is supporting this should be removed. All they see is dollar signs. I would like to know if the citizens of Dona Ana County will be having to pay any of the costs for Project Jupiter because I've heard things that make it sound like it's costing us money without our knowledge.
