I am writing this with my request to stop Project Jupiter. We struggle with huge global warming and climate changes and this project is a real danger to our planet. A fuel cell plant of this size has never been constructed before. This fuel cell gas plant will release toxic chemical pollutants and 10 million tons of carbon dioxide into our air. Project Jupiter's fuel cell plant will generate enormous amounts of hazardous waste containing: cancer-causing chemicals, heavy metals, toxic compounds, etc. All of these poison the human body, our water, and our soil. I think it is right to view the problems Project Jupiter will cause. I am hoping for you to consider people's requests. Remember that this project carries a real risk to us all.

The public should be given an additional 60 days to review and comment on the air quality permit so community members can participate equitably.

The air quality permit application should be denied outright given Bloom Energy's history of illegal dumping hazardous waste. Approving this permit would be government-sponsored environmental racism directed at residents of Doña Ana County.

If the permit is not denied outright, a public hearing needs to be held in Santa Teresa, in both English and Spanish, with an option to participate virtually.
