

## Isabella Corea

Please take into consideration the mass amounts of suffering not only the people of our communities will face but YOU as an individual will HAVE to go through as well. This isn't "progress" and shouldn't be seen as such. This is only deteriorating our planet and the very little water we have. You have to understand we won't be the only ones suffering. You will too, your family, your friends, we ALL will suffer as the human race. This power plant will equate to 23 atomic bombs in pollution a DAY. ONE DAY. Do you not comprehend how quick that is? Our atmosphere already is burning away as we speak, we do not need to speed up the process of our extinction. The earth will continue to live but we as people will not if we continuously allow these things to be done because you want a little money in your pockets. Truthfully more money is being wasted building these data centers and the usage of them. Please think carefully about the future of our world because truthfully we are already seeing the affects of climate change now, look at how hot is in in Europe. People are dying and this isn't going to help fix anything. We never needed AI before and we don't now, our literacy rates are dropping to new lows, our animals are dying and our water is being wasted for something so stupid. AI has no need in this world when we can think and provide for ourselves. Please understand how important this is. Thank you.
