

Barbara Lewis

I do not support Project Jupiter, which I believe creates significant concerns for the environment, air quality, and water usage. Greenhouse gases are expected to be emitted in huge quantities, an act that is atrocious given the extreme weather the country is already experiencing this year due to climate change. The project would only contribute to the problem. And the project will have major water usage, which is unconscionable in NM, a state that consistently has severe drought conditions. Please do not let this project harm New Mexico's environment.
