Hello, I was just made aware of this project and find it frustrating that I was not made aware of its construction sooner. This data center not only affects the locals, but everyone on our planet. Notice how I said OUR planet? I, and thousands of other people, never signed up for our resources to be drained of 1 million gallons of water a day, and it is completely unnecessary that we need to build a site for something (AI) that we have lived thousands of years without, especially at the cost of the individual wellbeing's of humans and our planet. I am opposed to the construction of Project Jupiter, and believe that the public should be given at least 60 more days to review and comment upon this project. Additionally, the air quality permit should absolutely be denied, and if it isn't, there should be a public hearing in both English and Spanish held in Santa Teresa with an opportunity to participate virtually. This project is further worsening the air quality of the surrounding areas, completely disregarding their physical health. Please do not give Project Jupiter this Air Quality Permit, as they have the potential to create 10 million tons of carbon dioxide that could be emitted into our atmosphere which can cause longer, more intense heatwaves, which leads to severe dehydration, heat stroke, heart attacks, and even premature death. Additionally, Bloom Energy has been fined \$1.4 million dollars for illegally storing, transporting, and dumping hazardous waste, so what makes you think they won't do it again? We, the public, did not sign up for this. No one will benefit from this data center in the long run, so please do not give them this permit.
