

Jakobína Guðmundsdóttir

It should be considered a crime, not only against our planet, but against humanity that the government can take this sort of action without taking the public into account. This affects every single one of us and its completely unnecessary, we should be given more time to decide on the matter. Bloom Energy has a history of illegally dumping hazardous waste so the air quality permit application should NOT be accepted. A public hearing will be held in Santa Teresa if it's accepted where people from across the globe will show up, virtually or in-person. The population of Doña Ana will experience extreme pollution in addition to their already bad climate. This is government-sponsored racism. We don't need a gigantic data centre for any reason whatsoever, we are doing fine as it is. Things like AI shouldn't be accessible to anyone besides medicine researchers and such people, not even the government should need AI. PUT A STOP TO PROJECT JUPITER
