

Chaney Howe

We are facing catastrophic and irreversible climate change. AI data centers are proven to contribute to this. They poison our air. They suck up all of our water. The Rio Grande is already dry. The only people who will benefit from a data center in Dona Ana county are sociopathic Epstein-class billionaire pedophiles and their wretched accomplices. As a sixteen-year New Mexico resident and former outdoor educator I am vehemently opposed to any and all AI data center construction on our lands. I implore you to deny air quality permitting to Yucca Growth Infrastructure, LLC for the good of New Mexico, the planet, and for all of humanity.
