I am asking that this data center should not be built. This is not a necessity and it will ruin the ecosystem. It will destroy everything. Why must we keep destroying this planet ? What do we get out of it ? Humans are going to become extinct soon because of projects like this and it hurts to see that a lot of people are willing to just turn a blind eye to it and act oblivious. This project will cause so much pollution and destroy so many things. Please think about our future. What do we even gain from a data center and why are they all now suddenly popping up ? Why do people not matter anymore ?
