

NA NA

As a resident of the United States, I am outraged to know that communities around our country are going to be stripped from their access to water, air and soil just for the existence of a massive data center. Globalization and efforts to make artificial intelligence a daily reality have only demonstrated negative effects on the planet and on people by altering their brain chemistry. I urge you to make the right decision and prevent humanity from making a mistake from which it cannot return. We, the people, do not want this. It does not benefit us and will not improve our lives or anyone else's in the long run. The temporary satisfaction of some is not worth sacrificing the lives of others. STOP BUILDING DATA CENTERS.
