

Anahi Morales Pabon

We do not need these data centers and Ai to live!! What we need is clean drinking water and a world where we can breathe and live not be in survival mode. We cannot do this to our planet. Think about everyone you have ever loved DYING because there is no water to drink and its so hot that you feel like youre melting and theres no trees for shade for us or for the animals. We won't be able to grow food or raise meat animals without water this is serious think about the future
