

Sondra Lawson

This project is short sighted and affects a rural community in a negative way. The air pollution and water usage are risks to a fragile environment. The people in the local area will not benefit, no huge job growth will occur. This company will drain already limited resources from the surrounding community and also disproportionately affect the local population with noise and air pollution and draining local water resources. It's large footprint will negatively affect wildlife in the area. Even those of us living in larger towns know that when one part of NM suffers it has negative affects on the whole state. The use of methane gas has to power the site negatively affects air quality. Stop project Jupiter and allow for public comment that will be heard. There is no up side for the local community or the state from this data center. Also increased energy prices will affect people! The land is not 'empty' and the resources are not for sale!!
