

Sara Isabel Ruiz Flores

I write to express my disagreement with project Jupiter.

I highly refuse to support a project that is going against the environment, that is going to consume most of the water in New Mexico. I have to remind you that we live in a DESERT. Technology should never detriment the environment and the landscape of the people that live and work in New Mexico. As a biologist, I will always talk about the benefits of preserving the environment, and the project Jupiter is completely the opposite. I hope data centers never make it, they benefit no one.
