Us humans can live without AI. These data centers will not help humanity as one wants us to believe it will. Taking up any clean drinking water, destroying habitats of native animals, releasing carbon dioxide in the air, isn't helpful. We as humans need to realize that we aren't the only ones on this planet. We aren't the only ones who live here. The animals, plants, insects, no matter how big or small our planet matters. Killing our planet just for the sake out 'humanity' isn't good. Our generation and the generations after us need a clean, healthy world to live in. Not a barren wasteland with animals they'd never get to see. We need to love the Earth as it has loved us. We need to protect the land, our animals, and the air. It's not only about Earth, but humans our selves. We are poisoning ourselves with the poor air quality due to data centers already. Yet it will only worsen with these conditions if this data center is built.
