

Grant Scheiffele

I find myself opposed to the AI Datacenter projects within New Mexico as the actual use of AI may not be sufficient across the community population. Aside from the jobs created to manage and create the Datacenter, I find that this will create diminishing returns on what benefit the NM population will experience, compared to the revenue it will generate for larger companies which do not truly integrate and support these communities. I find that unless there is a significant way to promote the well-being of New Mexicans in environmental and economic factors, which I doubt considering the history of other AI data centers, my opinion will not change. Our community needs to come first in the short and long term and this is an unsustainable practice

Sincerely,
