

Paloma Mexika

I am a lifelong New Mexican, and I strongly OPPOSE Project Jupiter. I am tired of seeing out of state corporations come to New Mexico to take advantage of our resources, and leave us to deal with the long term consequences. Calling something "eConOmIC dEveLoPMent" does not automatically mean it is good for our state.

A massive data center will add pressure on our water supply, more strain on our electrical grid, more industrial development, and the loss of the open landscapes that make New Mexico special, all while the profits flow somewhere else! These are NOT small things to overlook for the promise of temp jobs and the endless expansion of AI.

Water is one of New Mexico's most valuable resources, and we need to get real about what AI and data centers require. A corporation's ability to pay for the infrastructure of something DOES NOT mean the environmental and community costs should be ignored.

Southern New Mexico is home to families, communities, wildlife, landscapes, and water. It is home to the past, present, and future. These are things that cannot be produced, automated, or replicated by AI. And once they are gone, they don't come back.

Are we really willing to sacrifice all of this to appease our AI corporate overlords? Say NO to Project Jupiter & data centers in NM.
